Alexander Norta

On November 16th, I participated at the [WESOA'16](#) workshop, co-located with the [ICSOC'16](#) conference in Goa/India, with presenting my published paper with the title: "Establishing Distributed Governance Infrastructures for Enacting Cross-Organization Collaborations". My paper is about a lifecycle for setting up smart-contract based peer-to-peer collaborations between decentralized autonomous organization. This lifecycle is developed with CPN Tools, which allows for simulations, performance tests and the application of model-checking algorithms. At the same time I also chaired my own ISC'16- and RMSOC'16 workshops. Additionally, I had the honor to be a chair for the workshop organization too, which means I will be the publishing editor of the Springer workshop proceedings. During the stay, I was also invited to participate in a panel discussion about the future of service-oriented cloud computing. The participation in the event has also been very useful from a networking point of view because during the conference I found a consortium partner for the consortium of an EU-project proposal that is currently in progress.
