

# Business trip overview (DDECS 2015)

Artjom Jasnetski

PhD Student, TUT

IEEE international symposium DDECS15 (Design and Diagnostics of Electronic Circuits and Systems) took place in the capital of Serbia – Belgrade. It's a forum for exchanging ideas, discussing research results, and presenting practical applications in the areas of design, test, and diagnosis of electronic circuits and systems. It's a first time, event took place in Serbia.

Symposium was 3 days long, and contained multiple presentation sessions and two poster sessions. The program can be divided into two parts, one part of sessions was dedicated to design of analog and digital systems, and another part was dedicated to reliability, verification and test. 3 keynotes were given during the event, they were covering topics: cryptography, diagnostics and software. They were describing modern trends and hot problems in the academia and industry.

During the social event we've visited Tesla museum, the church of Saint Sava and Belgrade fortress. Friendly atmosphere, interesting topics and experienced attendees made this conference a good place to get a feedback about the research, I've been working on, and also make know other people and contacts from IT research community.
