

Sergei Odintsov

DATE (Design, Automation and Test in Europe) conference is one of the biggest and most important events for Europe's IT scientific community. Conference venue was located in beautiful city of Grenoble in southeastern France in the Alps valley. Wide range of IT related topics was covered by this conference such as hardware/software co-design, simulation, verification and test along with emerging topics such as cyber-physical systems, internet of things and industry 4.0. I have presented part of my PhD thesis as a poster and demonstrator every day during whole conference at DATE University Booth. While standing in the booth I have met a lot of interesting people and specialists in the field of IT. Our discussions helped me to find new approaches for solving my PhD thesis related problems and looking at problems from different angle. In addition, these discussions led us to new research and cooperation points.
