

DELTA Autumn Workshop November 16-17, 2015, Vakhtang Mosidze, PhD of Dept. of Computer Engineering,

University of Turku

I like to travel. Not just, like a tourist, im like to travel around the globe with a reason. University give you a possibility to work to travel and, what is more important to establish connection with people with similar to your ideas. Exept IEEE conferences workshops are best choice for young (and not so) researchers to establish good connection and grow new ideas

I visit Turku Technical University at DELTA workshop with oral presentation titled “3D routing in sensor network”. DELTA workshop is a place, were young researchers can share ideas and collaborate about modern ways and concept of future of perspective researches. Workshop was 2 days long, and during to this session I was able to listen about 7 oral and observe 10 poster presentation, mostly related to SoC at first day.

In a second day, we have a lot of discuss during session regarding IoT, and my presentation is also somehow related to IoT- not directly but sensor networks connection protocol is a big part of IoT. I got lot of feedback regarding my ideas.

A large workshop, such as DELTA, usually tries to cover all of relevant subtopics, however, this year a slight emphasis towards an emerging topic of Internet of Things – small low-power low-cost devices with ability to sense the real world and exchange data – was noticeable. Poster presentations generally provide an opportunity to meet the domain experts in live face-to-face
